## GreenMBalm™ Protocol Pre-Injection Fluid

If using de-ionized water:

Mix 16 oz. of GreenMBalm™ pre-injection fluid with 112 oz. of de-ionized water to create one gallon.

If using tap water or distilled water:

16 oz. of GreenMBalm™ pre-injection fluid

16 oz. of a water corrective of your choice

96 oz. of water to create one gallon

The body needs to be at room temperature.

If the cadaver has been in cooler/freezer for an extended period, inject as a first injection with closed drainage.

Watch for vascular distention, massage limbs.

Leave pre-injection in body a minimum of 30 minutes before injecting GreenMBalm™ Anatomical Embalming Fluid

This pre-injection fluid can be used as a co-injection fluid. Use as you would any other co-injection fluid. One can also use rose colored dyes with this fluid.
